PROJECT REVIEW : MILESTONE PROJECT – 1

Date: 21-04-2026

Smart Campus Event Management System

SDG: SDG 9-INDUSTRY,INNOVATION

Presented By:

KAMISSETTY LEELA LASYA PRIYA-VTU26551-23UECS1088

Courses Handling Faculty:

Dr.S.HEMALINI – M.E.,Ph.D.,

INTRODUCTION

1

- Many educational institutions still manage events manually, which is time-consuming and inefficient.
- Handling registrations, updates, and feedback manually often leads to errors, delays, and poor coordination.
- Managing large numbers of participants becomes difficult without a centralized digital system.
- This project introduces a Smart Campus Event Management System that automates the entire event lifecycle on a single platform.
- The system reduces human effort, improves data accuracy, and ensures smooth coordination of events.
- Students can easily browse events, register online, and receive real-time notifications via email.
- To enhance security and authenticity, the system implements OTP-based verification for user registration, preventing fake or duplicate accounts.
- Administrators can efficiently create, update, and manage events through a centralized dashboard.
- Event announcements, updates, and confirmations are communicated instantly through automated email services.
- The system also provides analytics to track participation and evaluate event performance.
- Overall, it improves user experience, enhances security, and ensures reliable event management.
- Such systems are widely used in modern universities and organizations, making this solution scalable, efficient, and industry-relevant..

PROBLEM STATEMENT

1

- In many educational institutions, event management is handled manually or through separate systems.

2

- This process is time-consuming and inefficient for managing multiple events and large numbers of students.

3

- Manual handling of registrations, updates, and feedback increases the chances of human errors.

4

- Delays in updating event information and participant details reduce overall efficiency.

5

- Students face difficulty accessing accurate and real-time event information

6

- Lack of centralized platform for event creation, registration, and tracking

7

- Poor communication due to absence of instant notifications

8

- Difficulty in tracking participation and analyzing event performance

9

- Need for a secure and automated system with OTP authentication and email notifications

OBJECTIVE(S)

1

◆ Design & Develop

- Secure web-based event management system
- Student & admin dashboards
- OTP-based user verification

2

3

◆ Implement

- Real-time event registration
- Event creation & management (Admin)
- Email notifications for updates

4

5

◆ Improve

- Reduce manual work
- Centralized data management
- Better communication using email

6

7

◆ Evaluate

- Track student participation
- Analyze system performance
- Ensure scalability & reliability

8

9

PROPOSED SYSTEM

1

- Web-based automated event management system
- Centralized platform for event creation, registration & feedback

2

- Admin dashboard for managing events and participants

3

- Students can browse, register, and track events easily

4

- Real-time updates and announcements
- OTP-based user verification for secure registration
- Email notifications for event updates and confirmations

5

- Reduces manual work, errors, and delays

6

- Improves communication and coordination

7

- Ensures structured and secure data management

8

- Scalable and reliable for institutions

9

PROPOSED SYSTEM ARCHITECTURE

◆ Input

- 1 • User login details (username, password)
- 2 • Event details (title, date, venue, department)
- 3 • Student actions (registration, feedback)
- 3 • OTP input for verification

◆ Processing

- 4 • Authentication & OTP verification
- 4 • Event creation, update, deletion (Admin)
- 4 • Event registration processing
- 5 • Email notifications for updates
- 5 • Data validation & announcement handling
- 6 • Analytics for participation tracking

◆ Database

- 7 • User & admin details
- 7 • Event and department data
- 8 • Registrations and feedback
- 8 • Event updates & notifications

◆ Output

- 9 • List of upcoming events
- 9 • Event details & announcements
- 9 • Registered events (student view)Admin dashboard with analytics
- 9 • Registration confirmation (email)

WORKFLOW

- 7
- 8
- 9

TECHNOLOGIES USED

1

- **Frontend:**

2

- HTML5, CSS3, JavaScript (ES6), Thymeleaf

3

- **Backend:**

- Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA

4

- **Database:**

- H2 Data base

5

- **Tools:**

- Eclipse, Maven, Chrome

6

- **Requirements:**

7

- 4GB RAM, JDK 17+, MySQL, Maven, Modern Web Browser

8

9

MODULE DESCRIPTION

Module 1: User Management

Handles student and admin registration, login, and authentication. Includes OTP-based verification to ensure secure access. Manages user sessions so only authorized users can access the system.

Module 2: Event Management

Allows admins to create, update, and delete events. Students can browse events, view details, and register for them. Includes event updates and announcements for better communication.

Module 3: Database Management

Manages storage of users, events, departments, registrations, and feedback using MySQL. Ensures data integrity, security, and efficient data retrieval.

Module 4: Analytics & Notification System

Processes event registrations, tracks participation, and displays statistics. Sends email notifications for event updates, registrations, and OTP verification. Provides real-time updates to users.

IMPLEMENTATION SCREENSHOTS

7

8

9

The screenshot displays the 'Student Portal' interface. On the left, a dark blue sidebar contains a graduation cap icon and the text 'Student Portal' with the tagline 'Join Smart Campus today'. The main content area is white and features a 'Student Registration' section with the subtext 'Create your student account'. The registration form includes input fields for 'Full Name', 'Phone', 'Email', 'Enter OTP', 'Username', and 'Department' (a dropdown menu). There are also input fields for 'Password' and 'Confirm Password'. A 'Send OTP' button is positioned next to the email field. Below the form is a dark blue 'Create Account' button with a user icon. At the bottom, there is a link 'Already have an account?' and a light blue 'Sign In' button with a right arrow icon. Three orange dots are visible in the top right corner of the slide.

- Allows students to register and log in securely Validates user details securely
- Uses OTP-based email verification for authentication
- Validates user credentials and input data
- Redirects to dashboard after successful login
- Shows error messages for invalid credentials or OTP

- 9

- Allows admin to log in using secure credentials
- Validates admin username and password
- Provides access to admin dashboard on successful login
- Displays error message for invalid login
- Ensures only authorized admin access

ADVANTAGES & LIMITATIONS

1

Advantages

2

- Provides real-time event updates and instant access to information
- Reduces manual work in event management and registration

3

- Improves accuracy and minimizes human errors

4

- Saves time for both administrators and students

5

- Centralized system for managing events, registrations, and feedback

6

- Easy tracking of participation and event performance
- Email notifications enhance communication

7

- **Limitations**

8

- Requires stable internet connection for proper functioning
- Initial development and setup effort is required
- Security measures must be properly implemented

9

- Depends on system maintenance and updates
- Limited features unless extended with advanced modules

Thank you
