- Many educational institutions still manage events manually, which is time-consuming and inefficient.
- Handling registrations, updates, and feedback manually can lead to errors and delays.
- Managing large numbers of participants becomes difficult without a proper system.
- This project automates the entire event management process in one platform.
- It reduces human effort and improves accuracy in data handling.
- Students can easily view events, register, and receive real-time updates.
- Admins can create, update, and manage events efficiently.
- The system provides better organization and centralized data management.
- Event announcements and updates can be communicated instantly.
- Analytics help in tracking participation and event performance.
- Improves overall user experience for both students and administrators.
- In real-world scenarios, similar systems are used in universities and organizations.
- Makes the system scalable, reliable, and efficient.
- Provides a professional digital solution for campus event management.

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

- In many educational institutions, event management is handled manually or through separate systems.
- This process is time-consuming and inefficient for managing multiple events and large numbers of students.
- Manual handling of registrations, updates, and feedback increases the chances of human errors.
- Delays in updating event information and participant details reduce overall efficiency.
- Students often face difficulty in accessing accurate and real-time event information.
- Existing systems lack proper integration for event creation, registration, and tracking.
- There is no centralized platform to manage all campus events in one place.
- Communication gaps occur due to lack of instant notifications and updates.
- Tracking participation and analyzing event performance becomes difficult manually.
- Therefore, there is a need for a centralized, automated, and reliable event management system.
- The system should ensure real-time updates, secure data handling, and efficient event registration and tracking.

OBJECTIVE(S)

1

- **To design and develop:**

2

- To design and develop a secure web-based event management system with student and admin dashboards.

3

- To design and develop an event registration system with proper validation and structured data management.

4

- **◆ To implement:**

5

- To implement real-time event registration and updates for students.
- To implement event creation, modification, and deletion features for admins.
- To implement an event updates/announcements system visible to students.

6

- **◆ To improve:**

7

- To improve efficiency by reducing manual event management processes.
- To improve accuracy and organization through centralized data storage.
- To improve communication using real-time notifications and updates.

8

- **◆ To evaluate performance of:**

9

- To evaluate participation based on event registrations and student involvement.
- To evaluate system performance in terms of responsiveness, scalability, and reliability.

PROPOSED SYSTEM

1

- The proposed system is a web-based automated event management platform for colleges and universities.

2

- It integrates event creation, registration, updates, and feedback into a single centralized system.

3

- The system eliminates manual event handling by allowing admins to manage events digitally.

4

- It provides real-time event updates and registration status to students.

- It solves communication delays by enabling instant announcements and notifications.

- Students can easily browse events, register, and track their participation in one place.

- Admin dashboards allow efficient event creation, modification, participant management, and analytics tracking.

5

- The system improves organization by maintaining structured and secure data storage.

6

- Compared to traditional manual systems, it significantly reduces human effort, errors, and delays.

7

- The solution is scalable, reliable, and suitable for educational institutions to manage campus events efficiently.

8

9

PROPOSED SYSTEM ARCHITECTURE

◆ Input

- 1 • User login details (username, password)
- 2 • Event details entered by admin (title, date, department, type, venue, description)
- 2 • Student actions (event registration, feedback submission)

◆ Processing

- 3 • Authentication system verifies user/admin login
- 4 • Event management module handles creation, update, and deletion of events
- 4 • Registration system processes student event registrations
- 4 • Event update/announcement system displays latest updates
- 5 • Validation ensures correct and complete data entry
- 5 • Analytics module processes participation data

◆ Database

- 6 • Stores user and admin information
- 7 • Maintains event details and department data
- 7 • Stores student registrations and feedback
- 8 • Stores event updates/announcements

◆ Output

- 9 • Displays list of upcoming events
- 9 • Shows event details and announcements
- 9 • Displays registered events for students
- 9 • Provides admin dashboards with analytics and statistics
- 9 • Shows confirmation messages for registration and updates

WORKFLOW

- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9

TECHNOLOGIES USED

1

- **Frontend:**

2

- HTML5, CSS3, JavaScript (ES6), Thymeleaf

3

- **Backend:**

- Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA

4

- **Database:**

- MySQL

5

- **Tools:**

- IntelliJ IDEA / VS Code, Maven, MySQL Workbench, Chrome

6

- **Requirements:**

- 4GB RAM, JDK 17+, MySQL, Maven, Modern Web Browser

7

8

9

MODULE DESCRIPTION

Module 1: User Management

Handles student and admin registration, login, and authentication. Ensures secure access and session management so only authorized users can use the system.

Module 2: Event Management

Allows admins to create, update, and delete events. Students can browse events, view details, and register for them. Includes event updates/announcements.

Module 3: Database Management

Manages storage of users, events, departments, registrations, and feedback using MySQL. Ensures data integrity and efficient retrieval.

Module 4: Analytics & Notification System

Processes event registrations, tracks participation, and displays statistics. Sends notifications and shows real-time updates to users.

IMPLEMENTATION SCREENSHOTS

1

2

3

4

5

6

7

8

9

The screenshot displays two parts of a web application. On the left is a dark blue sidebar for the 'Student Portal' with a graduation cap icon and the text 'Join Smart Campus today'. It contains three buttons: 'Browse & Register for Events', 'Get Digital Tickets', and 'Share Your Feedback'. On the right is a light blue background featuring a white 'Student Registration' form. The form includes fields for 'Full Name' (placeholder: 'Your full name'), 'Phone' (placeholder: '10-digit number'), 'Email Address' (placeholder: 'college@email.com'), and a 'Department' dropdown menu (placeholder: '-- Select Department --'). It also has 'Password' and 'Confirm Password' fields with placeholders 'Min 6 characters' and 'Repeat password' respectively. At the bottom of the form are two buttons: a dark blue 'Create Student Account' button and a light blue 'Sign In' button. A link 'Already have an account?' is positioned between the two buttons.

- Allows students to log in using their credentials
- Validates user details securely
- Redirects to student dashboard after login
- Shows error message for incorrect credentials
- Maintains secure session for student activities

6

7

8(A)

9

The left screenshot displays the 'Admin Portal' for a 'Campus Event Administrator'. It features a dark blue sidebar with a user icon and a menu with four items: 'Create & Manage Events', 'Manage Registrations', 'View Analytics', and 'Post Announcements'. The right screenshot shows the 'Admin Registration' form, which includes fields for 'Full Name', 'Phone', 'Email Address', 'Password', and 'Confirm Password'. A 'Create Admin Account' button is prominently displayed, along with a 'Sign In' link for existing users.

- Allows admin to log in using secure credentials
- Validates admin username and password
- Provides access to admin dashboard on successful login
- Displays error message for invalid login
- Ensures only authorized admin access

ADVANTAGES & LIMITATIONS

1

Advantages

2

- Provides real-time event updates and instant access to information
- Reduces manual work in event management and registration

3

- Improves accuracy and minimizes human errors

4

- Saves time for both administrators and students

5

- Centralized system for managing events, registrations, and feedback

6

- Easy tracking of participation and event performance

7

- Enhances communication through announcements and notifications

8

Limitations

9

- Requires stable internet connection for proper functioning
- Initial development and setup effort is required
- Security measures must be properly implemented
- Depends on system maintenance and updates
- Limited features unless extended with advanced modules

Thank you
